

To-Do List

Figure 1: App Icon

The default application icon was replaced with a more representative icon to clearly indicate that the application is a to-do list. This allows users to recognise the purpose of the application immediately without confusion.

Figure 2: App Opened

Figure 2 shows the home page displayed after the application is launched. A blue background was chosen to create a visually appealing and distinctive interface. Users can press the **Add** icon located at the bottom-right corner of the screen to create a new task or note.

Figure 3, 4, 5, 6: Create Task

After pressing the **Add** icon, the task creation page is displayed, as shown in Figure 3. Users are required to enter the task details, as illustrated in Figure 4, including the task information, category, and status. Once all the required information has been entered, users can press the **Save** button located at the bottom-right corner of the screen to store the task.

The image is a screenshot of a mobile application titled "To-Do-List". The app has a light blue background. At the top, there is a status bar showing the time "2:52" and various icons. Below the status bar is a header bar with the title "To-Do-List". The main content area contains a form with several fields: "Title", "Note", "Personal" (with a dropdown arrow), and "To Do" (with a dropdown arrow). At the bottom of the screen, there is a blue "SAVE" button. A red rectangular box highlights a white notification bubble with a blue icon and the text "Please fill all fields", which is positioned above the "SAVE" button.

Figure 7: Empty Field

If a user attempts to save a task without completing all the required fields, a notification message stating "**Please fill all fields**" will be displayed at the bottom of the screen, reminding the user to provide the necessary information before saving.

Figure 8: After pressing “Save” button.

After the task has been successfully saved, it will be displayed on the home page, as shown in Figure 6. This allows users to view and manage all their saved tasks in one place.

Figure 9, 10, 11: Edit Content.

To edit an existing task, users can select the desired task from the home page and modify its contents. After making the necessary changes, users can press the **Save** button to update the task. The edited information will then be reflected on the home page.

Figure 12, 13: Delete Tasks

To delete a task, users need to press and hold the selected task. A confirmation dialog will appear, asking whether they wish to delete the task. If the user selects **"Yes"**, the task will be permanently removed from the list. A notification message stating **"Task removed"** will then be displayed at the bottom of the screen to confirm that the task has been deleted.

Self-Evaluation Report

This project provided valuable experience in developing a to-do list application using Android Studio. Throughout the development process, I strengthened my understanding of Android application development while improving my programming skills and knowledge. Completing this individual assignment also increased my interest in mobile application development.

Compared to my previous assignment, I believe I demonstrated significant improvement by successfully completing a more challenging project. Although I am pleased with my progress, I recognise that there is still considerable room for improvement in both my technical skills and programming knowledge. If I were to evaluate my current ability on a scale of 1 to 10, I would rate myself a 7, as I was able to complete a more complex application through persistence and continuous learning.

During the development process, I encountered various challenges, including coding errors and application features that did not function as expected. To overcome these issues, I referred to online resources such as YouTube tutorials and AI tools. When these resources were insufficient, I sought assistance from my lecturer and classmates, who helped me identify my mistakes and provided guidance on improving and correcting my implementation.

Overall, this assignment was a valuable learning experience that enhanced both my technical knowledge and problem-solving skills. It encouraged me to think critically when debugging and implementing application features. Moving forward, I will continue to improve my programming skills through self-learning and practical experience so that I can develop higher-quality applications in future projects.
